Japari School Blocks Email-Based Threats and Inappropriate Content with SonicWall

Small K-12 school gains peace of mind while reducing overhead and easing administration.

Business Need

Japari School, an independent remedial school Parkview, South Africa, serves first through seventh grade students with learning difficulties. While the school had a SonicWall TZ 300 firewall it had deployed in mid-2015, it was looking to upgrade to accommodate growing needs. The priorities for a new solution included blocking advanced threats delivered via email and content filtering. But centralizing security management and easing administration while reducing overhead costs were also important.

Solution

Japari School has a longstanding relationship with SonicWall SecureFirst Partner Janus IT, which handles the school's IT and support needs. For the upgrade, Janus IT recommended a SonicWall TZ 670 NGFW with Capture ATP, Content Filtering, Gateway Antivirus and other services to best protect against internal and external risks.

Results

Since deploying the new TZ 670, Japari School has noted several benefits. One has been a strengthened security posture: there's been no more ransomware, and that 100% of attacks have been blocked.

The school has also gained peace of mind regarding harmful email content and inappropriate internet content (during the time SonicWall solutions have been deployed, not one student has been exposed to harmful content).

Moreover, the school reports that its overall experience with secure wireless provided to the office building and three classrooms has also been excellent.

"This is the best security investment decision we've ever made," IT manager Genevieve Hardy said. "With SonicWall, we have one less thing to worry about in our busy school, as we're always protected."
